

Other Agriculture activities:

- ✓ Agriculture is main source of income of villagers, more than 90% (approx.) population depends on agriculture
- ✓ For irrigation, wells, tube wells and river-canal are used
- ✓ Manual cutting and bundling of wheat-crop
- ✓ Threshing at field by machine and Hand operated thresher (Some taken on rent)
- ✓ Problem of capital, water and electricity for agriculture operations
- ✓ Ideal time for sowing wheat in Rajaborari is during 15nov-25nov
- ✓ Natural risks like heavy rain, pest attack etc.
- ✓ Some villagers cultivating only for personal use

Vermi-compost:

In villages of Rajaborari, the villagers use vermi-compost made at home. Dung, red soil, little water for dampness (nami) and Earthworms are used in this compost farming. We visited in villages Temrubahar, Rajaborari where students of 9th class were making the compost for the first time and processes were learned from the Rajaborari School.¹⁴
